Hydraulic Engineering - Staff Meeting

15-04-2026

TU Delft

1. 11:00 | Walk-in & Lunch
2. 11:10 | Faculty and Department developments
3. 11:40 | Theme: Next steps in finalising the outcomes of the four strategy sessions, including a proposal for alternative section structure.
4. 12:10 | | End of meeting

Agenda

TU Delft

Faculty and Department Developments

TU Delft

Welcome to our new colleagues in HE!

Bart Strijker (HSFR, Postdoc)

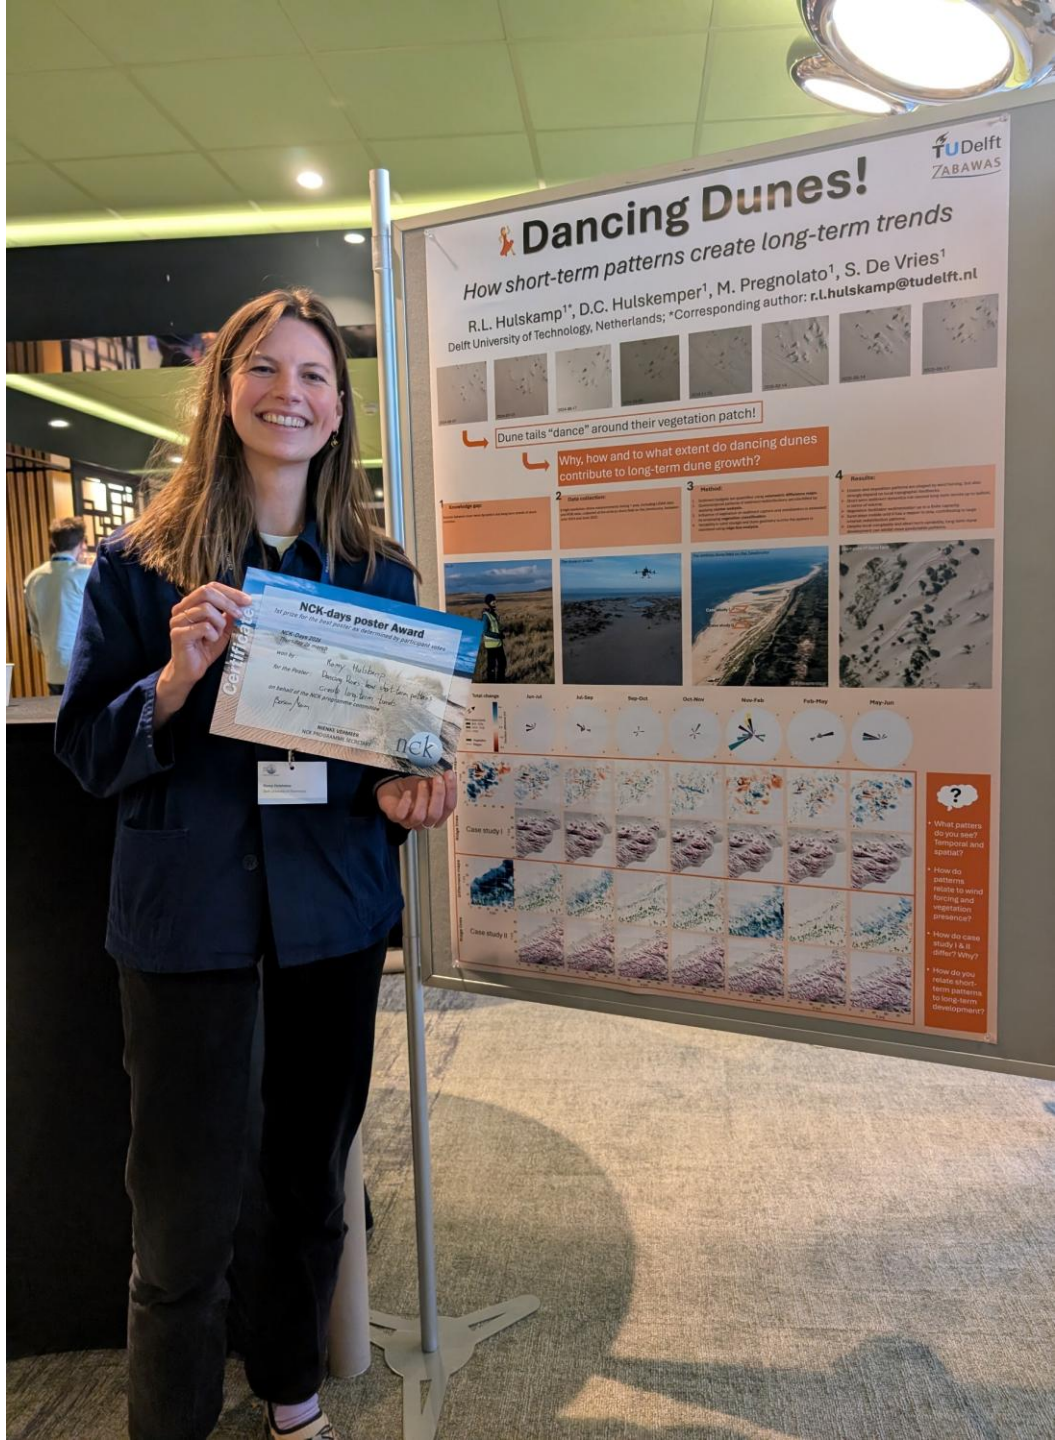
1 April

15 April

Kiran Basca (HSFR, Postdoc)

HE Highlights

- Romy Hulskamp (PhD) won the Best Poster award for her "DancingDunes" poster at the NCK days
- Tikon van Oudenhallen (MSc student) won best presentation



HE Highlights

- TU Delft Safety & Security Institute, together with Women In International Security (WIIS) and the Ministry of Defence, organised a panel discussion about women in safety & security. **Elisa Ragno** shared her insights on the importance of inclusivity in risk assessments, approaches, and disaster preparedness for flood risks'. Exploring how gender perspectives strenghten security and resilience

- Lab project: Waves Structure Interaction. HOS track Kashyfi Bin Salleh (MSc student HOS)

HE Higlights

Florian van der Stap (PhD) and Vince Deelman (PhD) went to Spitsbergen for the Sea Ice Mechanics and Physics course where Hayo is a guest lecturer, and which combines lectures with a unique opportunity for a week of fieldwork on sea ice. The course is available for MSc and PhD students with a few spots per year for TU Delft students. Contact Hayo for more details.

Other updates?

HR update: Social Safety

Joint academic and research staff social safety workshop was held on 7th April

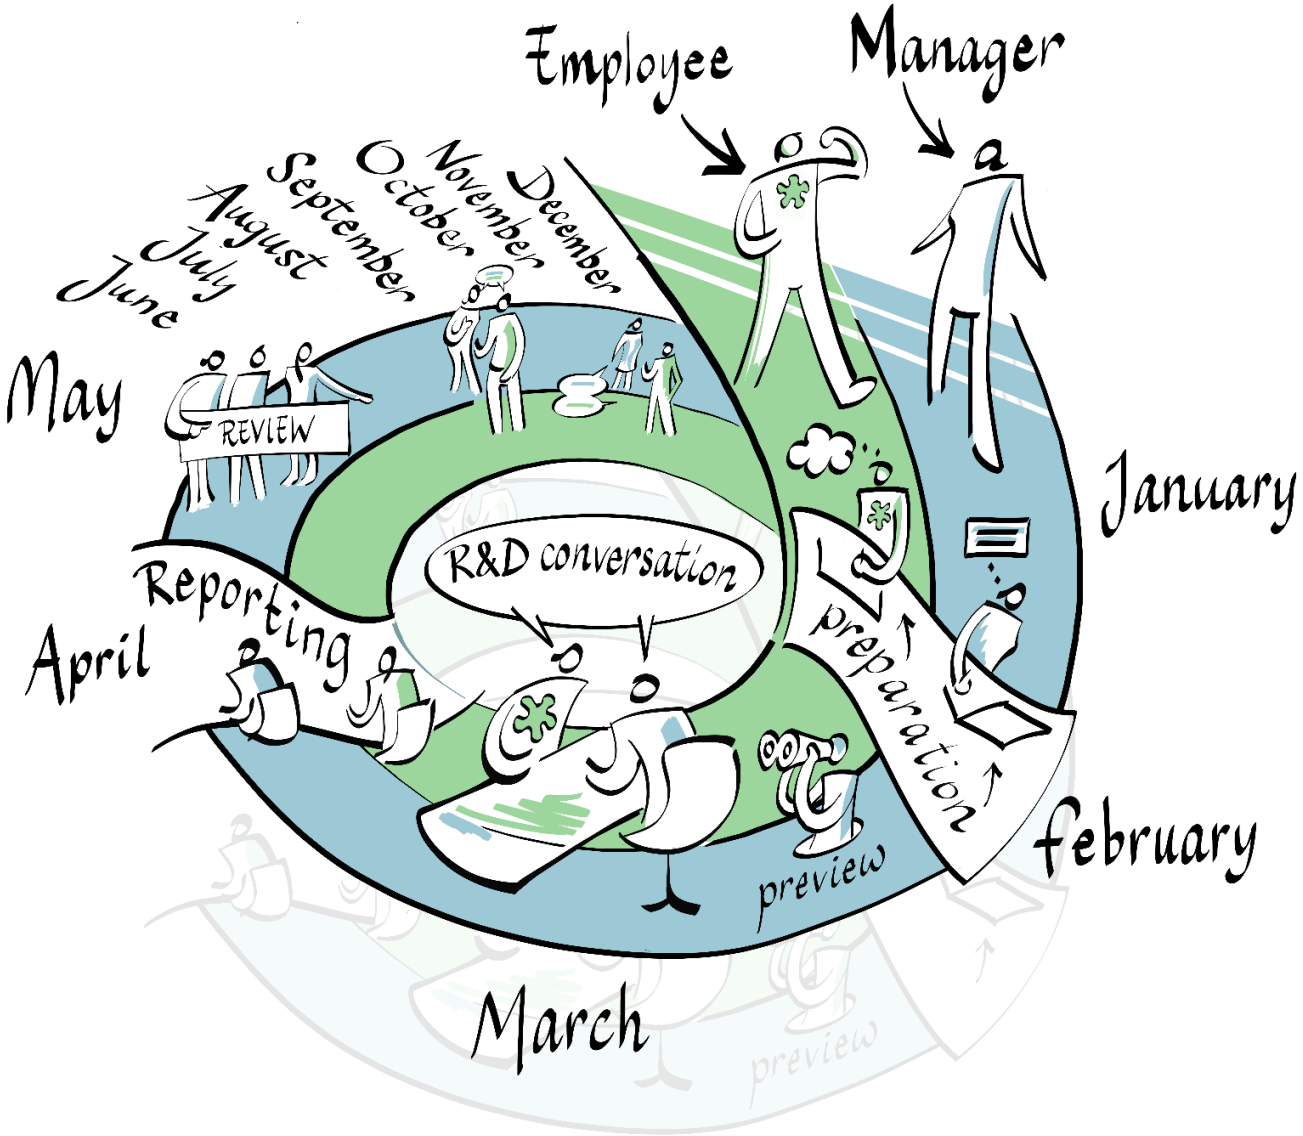
Workshop focused on opening dialogue across groups, appreciating that social safety issues can happen at all levels, and owning your role

Some key take-aways:

- The discourse needs to be continuous
- Concrete actions need to be defined (some have been) and acted upon
- Can we move away from the term "social safety" towards a "positive department working culture"?
- Other insights you want to share?

Next steps: The learnings from the workshops will be taken forwards by the new cross-departmental Safety Committee – watch this space!

HR update: Preparation R&D



Goal of the R&D cycle

The R&D cycle is a tool for both employee and line manager. You can use this tool to:

- Further **develop talents** and monitoring how that development is progressing
- **Align** personal goals with organisational goals.
- **Align** your expectations of that with your line manager, team and department,
- **Reflect** on what is going well and what can be improved.
- **Evaluate** results and make new agreements.
  - Collect feedback from colleagues and peers.

Take the chance to discuss what you need w.r.t. work/life balance, your wellbeing and job satisfaction.

TU Delft

Preparation by employee and supervisor

- Employee writes a self-evaluation on: performance, wellbeing, social and physical safety, interaction, collaborations (general reflection), and agreements while gathering feedback from colleagues.
  - Employees who provide education fill in the Education Yearly Report and gather input from the Director of Studies.
  - Take a look at the TU Delft Leadership Profile.
  - 360-degree feedback tool is helpful. See link: 360-degree feedback tool leadership profile - Intranet
  - A feedback tool My Leadership Profile is available on the Intranet.
- Employee hands in preparation via MyCareer **one week** prior to the R&D conversation.
  - As only the direct line manager has access to MyCareer, the employee should send the completed form and all supporting documents as a single PDF by email to the other participant in the meeting.
  - The line manager reflects on the execution of the yearly agreements from the previous R&D conversation, prepares the future conversation and gathers input from others to get a good understanding of the performance of the employee.
  - You can register for training courses on R&D conversations.

TU Delft

Promotions procedure

- We are working on a more transparent workflow and timeline for the canditature of staff members for promotion (at every stage).
- We are currently working with other departments to implement a more consistent process for the evaluation of candidates that are promoted within the Department.
- The new procedure is currently being assessed by the Section Heads and by HR, and will be issued soon.
- The procedure will work seamlessly within the boundaries of the TU Delft Preview, R&O, Review cycle
- Watch this space!

C71 - Hydraulic Str. & Flood Risk	€ 18,6	€ 20,7
C72 - Environmental Fluidmechanics	€ 25,0	€ 21,2
C73 - Coastal Engineering	€ 26,3	€ 55,9
C74 - Offshore Engineering	€ 1,9	€ 52,1
C75 - Laboratory Of Fluidmechanics		€ 4,8
C76 - Rivers, Ports & Waterways	€ 6,1	€ 18,3
C7A - Support Hydraulic Engineering		-€ 0,1
Total leave payment	**€ 202,3**	**€ 251,6**

HE Department Vacation Hours: Status and Value (1-4-2026)

Section	Hours	Value (€)
CE	**10163**	**€ 333.386**
Permanent	3575	€ 171.944
Temporary	6589	€ 161.442
EFM	**8051**	**€ 318.813**
Permanent	4849	€ 243.344
Temporary	3202	€ 75.468
HE-LAB	**2291**	**€ 79.528**
Permanent	2291	€ 79.528
HE-SUP	**1967**	**€ 80.875**
Permanent	1967	€ 80.875
HSFR	**9210**	**€ 307.267**
Permanent	3912	€ 179.789
Temporary	5298	€ 127.478
OE	**8950**	**€ 278.018**
Permanent	3118	€ 137.650
Temporary	5833	€ 140.367
RPWDE	**8205**	**€ 246.148**
Permanent	3253	€ 136.253
Temporary	4951	€ 109.895
Grand Total	**48838**	**€ 1.644.035**

Leave Hours

Please register your leave hours

- If, like me, you were unable to register the leave hours taken in January to March due to the TimEnterprise leave hours system showing the wrong numbers, please now register the hours you took in those months into April and May (for days you have worked) - this is a work around

Why?

- The timesheets produced for projects are not retrospective, and to claim the correct time on projects and annual leave balance, we need the numbers entered

1e GS 2024 v 2025

In €1000	2024	2025	▲%
Revenue work for third parties	495	664	34%
Other external revenue	20	20	0%
Total revenue	**515**	**684**	**33%**
Personnel costs	8.977	8.384	-7%
Housing costs	170	20	-89%
Equipment & inventory	300	261	-13%
Other costs	382	213	-44%
Total costs	**9.829**	**8.878**	**-10%**

We have met our target! ….but we cannot relax yet

Project effect 2024 v 2025

Project effect	2024	2025	%
Costs perm. Staff	7643	8033	5%
Project effect perm. Staff (writing hours)	684	1149	68%
Total perm. Staff	6959	6884	-1%
Costs temp. Staff	3680	4836	31%
Project effect temp. Staff	3031	4156	37%
Total temp. Staff	649	680	5%
Total	7608	7564	-1%

We are still losing money on temporary staff due to projects awarded before 2023 – but we have improved our project effect – this will show benefits moving forwards

Theme: Next steps in finalising the outcomes of the four strategy sessions, including a proposal for alternative section structure

TU Delft

New Vision of the HE Department*

Hydraulic Engineering is at the core of a safe, resilient, and sustainable civil system, where people and nature thrive. Our vision is to enhance the performance of hydraulic systems and infrastructure, with the aim to drive sustainable development, climate adaptation, hazard resilience and the transition to clean energy.

*approved by HE MT

New Mission of the HE Department*

To advance sustainable development and climate resilience by embedding societal needs into the heart of hydraulic research, education and valorisation. Our research is grounded in a deep understanding of hydraulic processes and system dynamics, with our work synergizing theory, modelling, fieldwork, laboratory experiments, and technological innovations. We embrace the TU Delft values by fostering an academic environment that champions diversity, inclusion, and excellence. We empower the next generation of engineers to solve global challenges through world-leading education and mentorship with a strong commitment to equity, integrity, and courage. Working in partnership with stakeholders and across sectors we deliver practical solutions for offshore, coastal, delta and freshwater environments.

*approved by HE MTc

The HE Department 7 ambitions*

1. We conduct scientifically excellent and societally relevant research that has impact.
2. Our MSc and PhD graduates are recognised as top professionals and take on leadership roles in academia, industry, and government.
3. We maintain strong partnerships with industry and public stakeholders, co-developing innovative solutions with measurable impact.
4. Our education is world leading and is open to people beyond TU Delft.
5. We operate world-class, unique lab and field research infrastructure, and have realized a modern, sustainable facility in Delft.
6. We have a positive global presence and influence.
7. The department has a proactive, efficient, inclusive and safe work culture that promotes the TU Delft values.

*approved by HE MT

A proposal for a new HE Department structure*

A proposed new structure is being prepared and derives from Strategy Sessions 3 and 4 aims to:

- Create alignment with our new vision and mission
- Better align our Sections with our research and education lines, and our 7 ambitions
- Provide clearer external visibility
- Rebalance numbers in Sections given retirements

*undergoing review by HE MT

Staff Consultation at Section Level and external review

- A proposal document has been drafted and is being reviewed by the HE MT
- The proposal document will be issued to staff next week for consideration
- There will be a consultation at the Section level, at one of your next Section Meetings. The HoD will participate at these to facilitate discussions and collate feedback
- Feedback will be sought from the PhD Council and from a small committee of external partners
- All feedback will be collated and final adjustments to the proposal will be made if needed
- The HE MT will make a decision at an MT meeting end of May

Any questions?
