Dear colleagues,

We would like to give you a short update on how to apply for TKI Deltatechnologie funding. As announced, TKI Deltatechnologie now works with a programmatic approach based on three defined programme lines.

- More information about these programme lines can be found here:
<https://tkideltatechnologie.nl/programmaliijnen/>
- For 2026, approximately €7 million is available.
- There are three submission rounds per year. The deadlines are: 31 May, 30 September, and 31 December
- More information about the application procedure can be found here:
<https://tkideltatechnologie.nl/hoe-we-werken/#samenwerkingsprojecten>

You are free to submit a full proposal directly. However, the advice from the Director of TKI Deltatechnologie is to first submit a short project idea to the programme directors. This can be done via the 'projectschets' form on the TKI website, which can be submitted to info@deltatechnologie.nl. The programme directors can advise, for example, on whether the project idea fits within one of the three programme lines and whether there are opportunities to strengthen the impact of the research by connecting it to other ongoing or planned projects.

Internally, the procedure is the same as for any other project. Therefore, if you are interested in submitting a proposal, please make sure to also reserve sufficient time for the internal approval procedure.

Kind regards,

Elske Bakker

Subject: Update TKI Deltatechnologie 2026 & call for ideas

Dear colleagues,

We would like to inform you about an important change in the setup of the TKI Deltatechnologie funding scheme as of 2026, and what this means for our department.

Change in funding approach (2026 onwards)

In previous years, each partner had a pre-allocated TKI budget from which projects could be developed. This approach has now been fully discontinued. Instead, the full budget (**approximately €7 million**) is open and will be distributed across three programme lines:

1. *A future-proof, adaptive delta* (long-term challenges) – Programme lead: Jeroen Rijke
2. *A safe, resilient delta* (today's and tomorrow's challenges) – Programme lead: Durk Klopstra
3. *A healthy, nature-inclusive delta* (quality and liveability challenges) – Programme lead: Hilde Passier

Projects will be developed in a fully competitive, collaborative setting across partners (knowledge institutions, industry and government). Both smaller and larger projects can be proposed, with a clear ambition to also develop larger-scale Public-Private Partnerships (PPS).

Creation session on the 12th of May

On Tuesday 12 May, a TKI Deltatechnologie creation session will take place, where partners can jointly develop project ideas into potential PPS proposals. You can find more details in the attached invitation.

If you are interested in contributing ideas, joining a consortium, or exploring opportunities, we strongly encourage you to participate. Registration is possible via the link mentioned in the attachment.

We realise that this invitation comes at very short notice. Unfortunately, we ourselves were only informed recently. Nevertheless, we felt it was important to still share this opportunity within the department, as it may provide valuable possibilities to position new ideas and collaborations at an early stage. We would also encourage colleagues attending the session to actively think along about broader opportunities, strategic themes and potential collaborations for Hydraulic Engineering as a whole.

Financial conditions

For projects submitted under the new scheme, the financial conditions remain unchanged compared to 2025. You can find information on the TKI website:

<https://tkideltatechnologie.nl/documenten/>

Remaining budget (2022–2023)

There is still some remaining TKI budget from the 2022–2023 rounds. If you have a project idea ready (duration approx. 1–1.5 years), this can still be submitted under the previous framework. Please contact **Andrei Metrikine** if you would like to explore this option.

If you have any questions, feel free to reach out.
